INDUSTRY STARTER PACKS FOR ENTERPRISE ARCHITECTS

Banking

The complete set — what is in it, what each piece is for, and the order to pick them up

Two volumes, six spreadsheets, three decks and the worked example they were all built against. Read this first: it says which file answers which question, and which three you need in your first week.

South African lens. Sourced throughout. October 2026.

THE SET

Guide 1 · What is in this set

GUIDE 1

What is in this set

Sixteen files. Three of them matter in your first week.

This set exists so that an architect who has never worked in a bank can walk into one and be useful. Not eventually — within a quarter.

It comes in four parts and a worked example. The two books teach and instruct, the spreadsheets are what you actually fill in, the decks are what you put on a screen in front of other people, and the Ardent Union files are a complete, populated example of what the finished thing looks like.

Read these three first

> **IF YOU READ NOTHING ELSE**
>
> **`01 Learner guide`** — read it once, front to back, before you start. It is the industry.
>
> **`02 Workbook`** — never read front to back. Open it at the phase you are in and work the numbered steps.
>
> **`03 Excel templates / Banking_EA_Metamodel_TEMPLATE.xlsx`** — the empty repository. Everything the workbook tells you to do lands in it.

The whole set

Folder	File	What it is	When you use it
01	Banking — a starter pack for enterprise architects	The learner guide. 255 pages, 22 chapters.	Read once, keep beside you
02	Banking — the architecture workbook	The ADM workbook. 157 numbered steps, 30 printable forms.	Every working day
03	Banking_EA_Metamodel_TEMPLATE.xlsx	The empty repository. 111 sheets, with the change control the example lacks.	From day one
03	Banking_Architecture_Comparison_Tool_TEMPLATE.xlsx	Baseline against target, with the governed-drift test.	Phase E, then quarterly
03	Banking_EA_Workshop_Capture.xlsx	Live capture for the five workshops.	In the room
03	Banking_EA_Transcription_Forms.xlsx	30 sheets matching the printed forms.	Typing up paper
03	Banking_EA_Principles_and_Standards.xlsx	45 principles, 32 standards, ready to adopt or argue with.	Preliminary phase
03	Banking_EA_Maturity_Assessment.xlsx	26 scored dimensions with the evidence for each.	First month, then annually
04	Banking_EA_Executive_Briefing.pptx	22 slides for the executive committee.	End of the first quarter
04	Banking_EA_View_Templates.pptx	58 slides: all 50 ArchiMate 4 views, empty and guided.	Whenever you draw
04	Banking_EA_Workshop_Pack.pptx	48 slides facilitating the five workshops.	In the room
05	Banking_TOGAF_Metamodel.xlsx	The worked example — a populated repository for an invented bank.	When you want to see what finished looks like
05	Banking_ArchiMate4_Views.pptx	Worked ArchiMate 4 views of that repository.	Alongside the view templates

The two books, and why they are separate

	Volume 1 — the learner guide	Volume 2 — the workbook
Read	once, front to back	never front to back
Answers	what this industry is and how it runs	what do I do on Monday
Shelf life	keep it as reference	consumed — you write in it

Volume 1 covers the lines of business, the vocabulary, the business model, the roles, the money, the operating model, the process model in BPMN, the data model, the application landscape, BIAN and the other reference architectures, the providers, the regulator, and how to model all of it in ArchiMate 4. Volume 2 takes the ADM phase by phase and says which sheet, which columns, who signs it, how you know it is done, and how it usually goes wrong.

They interlock. Every step in volume 2 with teaching behind it carries a **Look it up** line naming the volume 1 chapter and section, and volume 2's appendix E indexes all 157 steps back to volume 1.

Print volume 2

Volume 2 is built to be printed and written in: 30 printable forms whose columns are the real columns of the real sheets, question sets with ruled answer space, and working tables inside the steps.

> **THE TRANSCRIPTION LOOP**
>
> Paper in the room, spreadsheet the same afternoon, repository record with a change reference. Paper that is never typed up is a wasted workshop; a record typed up without a change reference is a repository that will rot inside a year.

The notation

Everything that is architecture is modelled in **ArchiMate 4** — 42 elements, 11 relationships. The one exception is level-2 process models, drawn in BPMN 2.0, because ArchiMate has no swimlanes and in a process model the hand-off is the point. Volume 1 chapter 16 teaches the notation; volume 2 appendix D maps all 64 object sheets and 25 relationship sheets of the repository onto it.

What the worked example gets wrong, on purpose and not

The Ardent Union repository is a teaching artefact and it has real defects. The books do not smooth them over — they are the best material in the set, because every one of them is a defect you will meet in a real repository.

Its index reports 878 records; its own itemised list totals 846. It claims every object type carries records while the gap sheet and the compliance-assessment sheet are both empty, so the dashboard's cheerful "gaps overdue: 0" is a zero computed over nothing. Several relationship sheets pair row *n* of one list with row *n* of another, which is how Internal Audit comes to own Finance and Regulatory Reporting and Basel III is evidenced by identity lifecycle management. Six or seven data entities are classified Public, among them Customer and Payment Instruction. There is no change control at all — no version columns, no change log, no baselines. The template in folder 03 ships with those gaps fixed and says on its face what it changed.

Two invented banks, kept apart

Table Bay Bank is volume 1's running example, used to make the teaching concrete. **Ardent Union Bank** is the bank inside the worked-example repository. Both are inventions, and every figure attributed to either is illustrative.

What this set does not do

It does not pick your vendor — the providers chapter names who plays in each category and says plainly, at both ends, that these are examples and not recommendations. It does not replace legal advice: the regulatory chapters tell you what the regulator inspects and which columns are the evidence, not whether your arrangement complies. And it does not fill itself in, because a repository somebody else populated is a document, not an architecture.
